INNOVATIVE
P A N E L S
FENIX PROGRAM

Fenix is a composite of cellulose and state-of-the-art resins. 70% of this material is made from layers of paper, the inner ones soaked in thermosetting resins and the outer ones in the latest generation of acrylic resins, all simultaneously subjected to heat and pressure.

These processes were developed in the laboratory supported by the use of nanotechnologies that modify molecular structures at the scale of nanometres, or one millionth of a millimetre.

The result is a homogenous and non-porous high-density product with unique characteristics.

Fields of application

Features

Offices

Hospitality and Catering

Schools

Visual comfort
(low light reflectivity, extremely matt surface)

Soft touch

Retail and Contract

Kitchens

Health and Well-being

Thermal healing of superficial micro-scratches

Anti-fingerprint

Suitable for contact with food

High antibacterial properties

High resistance to acid solvents

Resistance to scratches and abrasion

Resistance to dry heat

Hygienic

Rub resistance

Mold-resistant

Antistatic

Self-supporting (for 6, 8, 10 and 12 mm)

Dimensional stability even at high temperature changes

Hydro-repellent

Excellent colour intensity and depth

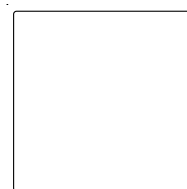

Impact resistant

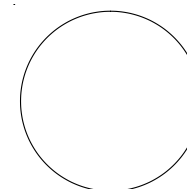

Lightfastness

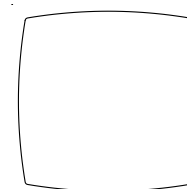

Our main Table Tops shapes

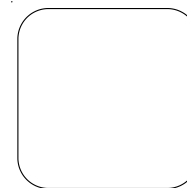

SQUARE

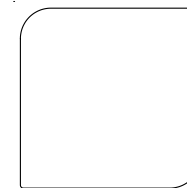

ROUND

CONVEX

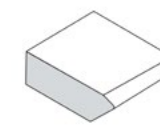

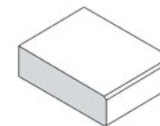

SPOKED

LEAF

Our technical department is at your disposal for any other shape or size you may require.

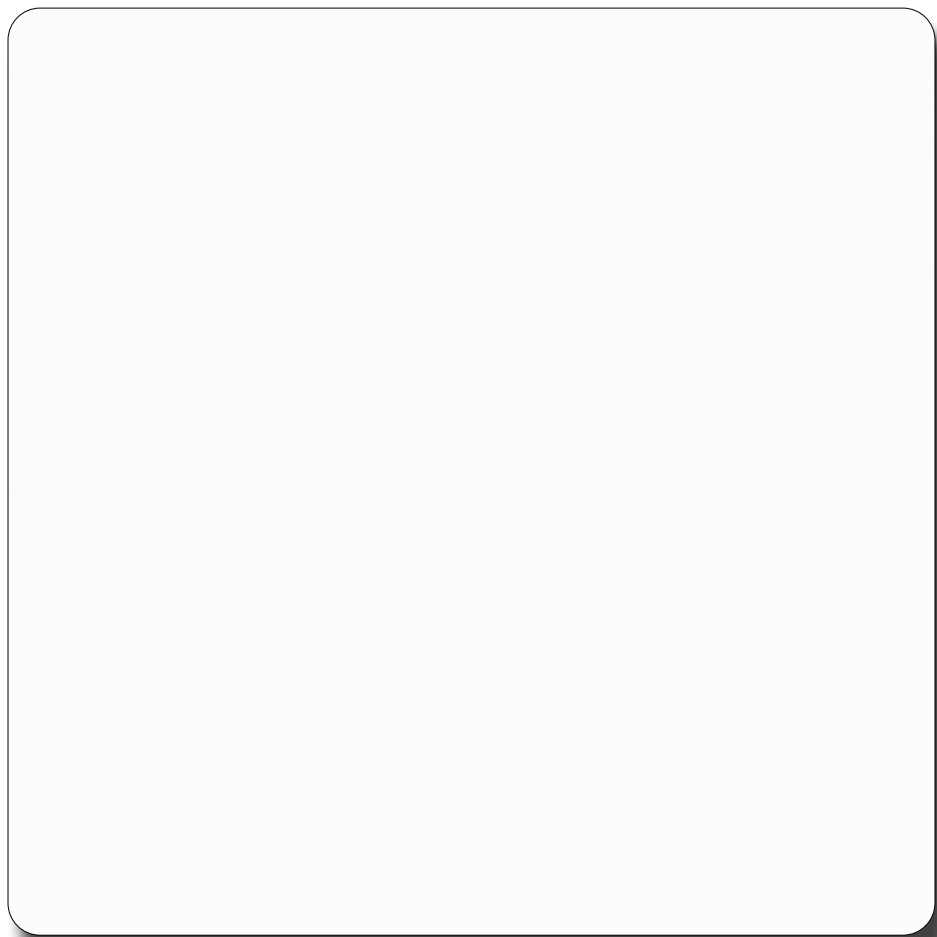

The edges are secure, free of cutting residues and jagged edges.

For all other edgings, please ask us.

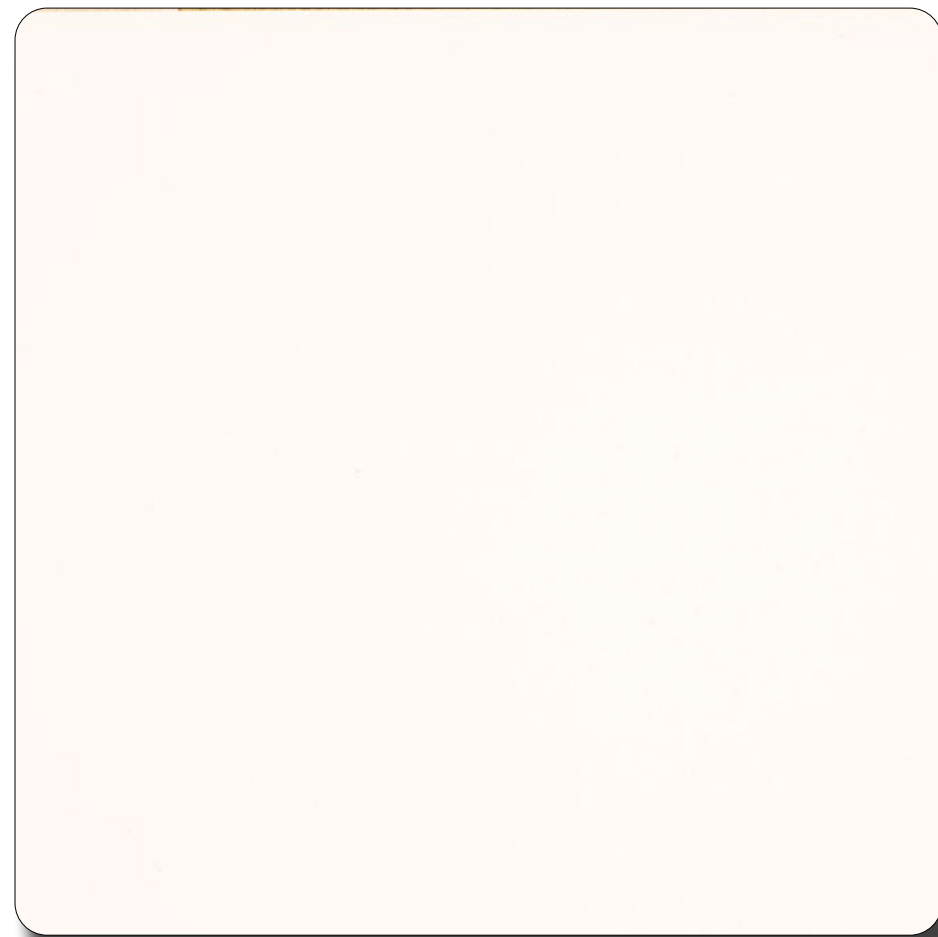

THE TOPS CAN BE
FIXED BY MEANS
OF 6MA THREADED
BLIND HOLES
WITHOUT THE USE
OF BUSHINGS. THE
POSITION OF THE
HOLES CAN BE
CUSTOMIZED TO SUIT
ANY TYPE OF TABLE
BASE OR STRUCTURE.
